Executive Summary

Every odd numbered year, the Wisconsin Elections Commission (WEC) submits a report to the Legislature on “impediments to voting faced by elderly and handicapped individuals” after “consult[ing] with appropriate advocacy groups representing the elderly and handicapped populations.” Wis. Stat. § 5.25(4)(d). The WEC has developed its accessibility program to produce this report and to support the voting rights of people with disabilities. It has four pillars:

- the polling place accessibility review program
- the Accessibility Advisory Committee
- training
- the supply program

Each pillar provides resources for clerks to ensure that the voting process is fully accessible and to identify any potential improvements.

In 2024 the WEC began a partnership with the Wisconsin Coalition of Independent Living Centers (WICLC) which allowed the WEC to use certified Americans with Disabilities Act (ADA) assessors to conduct polling place reviews. Reviewers are trained by WEC staff on relevant election laws and practices. They assess polling places on Election Day, using a survey that addresses each area of a polling place. Commission staff then review these reports, send the findings to the municipality, and work with the clerk to file a Plan of Action and bring the polling place into compliance. The WEC also provides resources like the Polling Place Accessibility Self-Assessment for clerks to independently identify inaccessible aspects of their polling places.

Commission staff meet monthly with the Accessibility Advisory Committee (AAC), which is composed of members who represent disability advocacy organizations that focus on voting. A list of members can be found in Appendix D. The AAC developed the survey used for polling place reviews on Election Day, and the survey takes into account state and federal accessibility laws. It assigns each question with a low, medium, or high severity ranking. The invaluable partnership between the WEC and the AAC members allows the Commission to receive timely information about barriers elderly voters and voters with disabilities may face in the electoral process. For example, AAC members informed the WEC of the need for a new hospitalized voting guide, which was developed and used in 2024, and of the continued need to educate clerks and election inspectors that Wis. Stat. § 6.79(8) allows a voter who is not able to state his or her name to have another individual, who may be an election inspector, do so. Commission staff are working on training and other tools to address this ongoing issue.

Clerks can use the WEC supply program to address issues found in a survey. Items the WEC can send to clerks – at no cost to the municipality – include doorbells, cones, and parking or entrance signs. The accessibility reviews and supply program have also identified accessibility concerns that have low or no-cost remedies, such as: keeping interior corridors and voting areas free from obstacles; clearing leaves, snow, and ice from pathways; and providing training to election inspectors on best practices when interacting with elderly voters and individuals with disabilities.

The following report details results from the survey and provides information on the WEC’s accessibility program.

Polling Place Accessibility Reviews

Every election, the WEC sends reviewers to assess polling places for compliance with accessibility and elections laws. In 2024 the WEC formalized a partnership with the WI Coalition of Independent Living Centers. Now, the WEC contracts certified ADA assessors from each of the eight independent living centers around the state (Indigo, Compass IL, Midstate Independent Living Choices, Independent Living Resources, Options for Independent Living, Access to Independence, Independence First, and Society's Assets) to conduct polling place reviews. Since the assessors are already trained in ADA requirements, Commission staff only provide training on election laws. This training is provided virtually via Zoom for new reviewers. Returning reviewers can choose to attend the Zoom training but must also receive 100% on online assessments prior to each election. These assessments include identifying election notices and voting equipment, as well as analyzing curbside voting and accessible voting equipment set-ups prior to each election.

The survey that reviewers complete was revised in 2023 with the help of the AAC. The goals of this revision were to correct out-of-date information, increase quantitative data collected, and improve efficiency for reviewers. The survey is based on requirements outlined in the Americans with Disabilities Act, the Americans with Disabilities Act Accessibility Guidelines (ADAAG), the ADA Checklist for Polling Places, the ADA Guide for Small Towns, Wisconsin Building Codes, and Wis. Stat. 5-10 and 12.

Questions target areas of the polling place that voters navigate in an attempt to capture a voter's experience. WEC staff worked with the Accessibility Advisory Committee to assign a low, medium, or high severity ranking to each question. These determinations allow Commission staff to obtain a more nuanced understanding of the overall accessibility of each polling place. The severity rankings are defined as:

1. **Low Severity:** A low severity finding indicates a barrier that makes it more difficult for an elector with a disability to enter a polling place and cast a ballot privately and independently. Low-severity barriers are unlikely to prevent an elector with a disability from exercising their right to vote but do add extra burdens that are not faced by voters without disabilities.
2. **Medium Severity:** A medium severity finding indicates a barrier that makes it significantly more difficult for a voter with a disability to enter a polling place and cast a ballot privately and independently. Medium-severity barriers, especially in combination, can prevent a voter with a disability from exercising their right to vote and add significant burdens that are not faced by voters without disabilities.
3. **High Severity:** A high severity finding indicates a barrier that, in and of itself, would likely prevent a voter with a disability from entering a polling place and casting a ballot privately and independently.

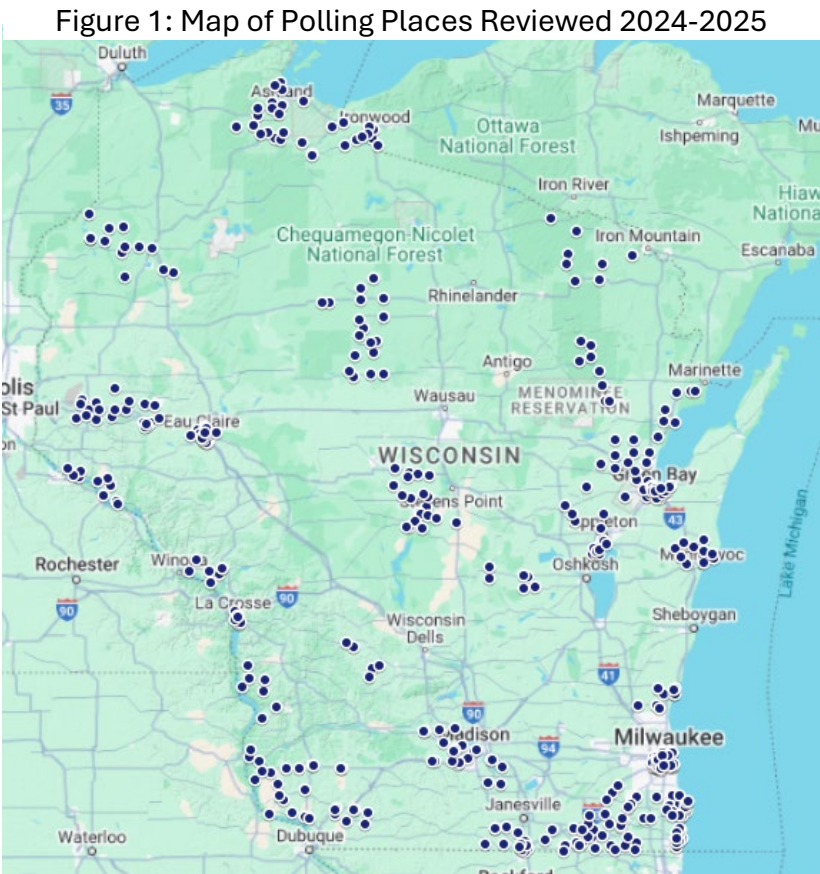

After each election, WEC provides a report of non-compliant findings to each municipality for the polling place(s) visited. These reports detail the problems identified on Election Day and provide municipal clerks with suggested resolutions to these issues. Clerks are required to file a Plan of Action with the WEC that addresses all concerns outlined in the report. WEC staff then review each Plan of Action and work with each municipality to ensure cost-effective and comprehensive solutions are put into place. Local election officials are provided with the opportunity to order accessibility supplies to assist their efforts in remedying problems. Those supplies are purchased by the WEC using state funds and are sent to requesting municipalities at no cost to them. These supplies can include signature guides, page

magnifiers, wireless doorbells, cones, and various signs for parking areas, pathways, and accessible entrances.

In 2024–2025, 477 polling places were reviewed across 299 municipalities in 42 counties.

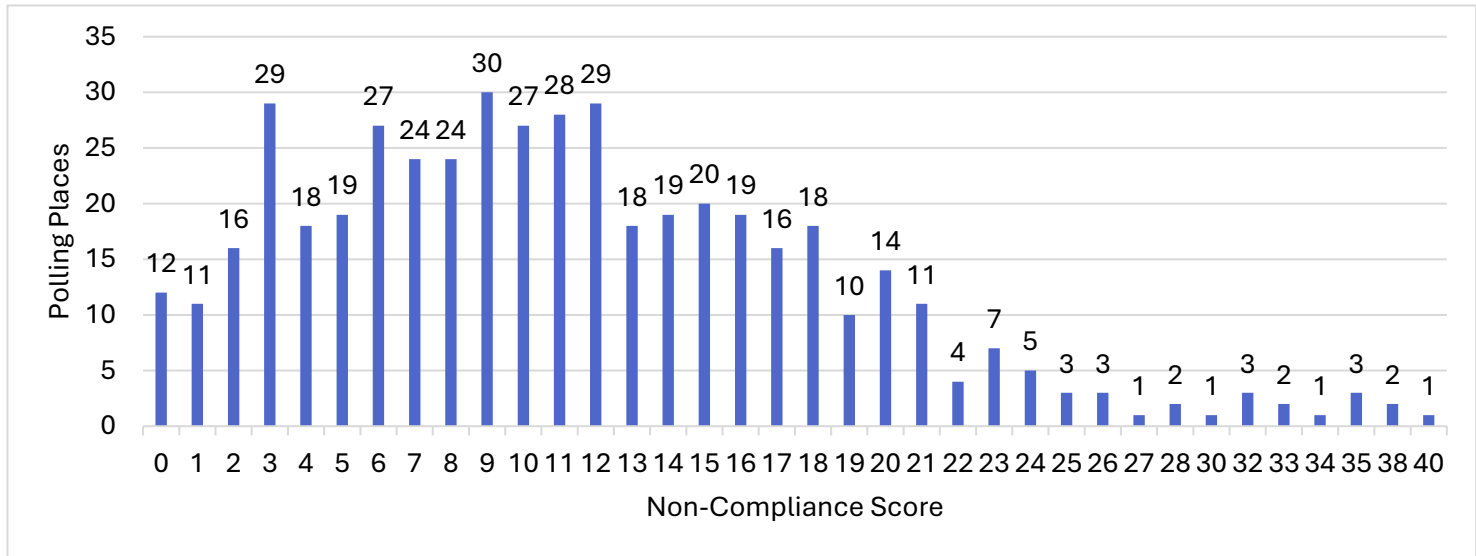

- 61 at the 2024 Spring Primary
- 71 at the 2024 Spring Election
- 36 at the 2024 Partisan Primary
- 120 at the 2024 General Election
- 16 at the Special Primary Racine County Executive
- 17 at the Special Election Racine County Executive
- 55 at the 2025 Spring Primary
- 101 at the 2025 Spring Election

A complete list of polling places reviewed, and their non-compliance scores, can be found in Appendix A. Twelve polling places did not have any non-compliant findings identified in their review. A list of these polling places can be found in Appendix B.

Historically, the figure used to assess the accessibility of a polling place has been the average number of non-compliant findings. However, the number of non-compliant findings is not necessarily indicative of a polling place’s accessibility, because there is significant variation in the severity of non-compliant findings. For example, an accessible parking sign being posted too low and no accessible voting equipment being available should not be treated equally. In 2023, staff began using a non-compliance score to assess polling places.

Figure 2: Distribution of Non-Compliance Scores

A polling place’s non-compliance score is calculated by multiplying each non-compliant finding by its severity. Non-compliant findings with a low severity are multiplied by one, medium multiplied by two, and high severity are multiplied by three. The sum of these calculations is the polling place’s non-compliance score. Lower scores are more compliant, and higher scores are less compliant. The median non-compliance score was 11, which is the same as the 2022–2023 election cycle.

For comparison, the average number of non-compliant findings was also calculated. In 2024 the average was 5.4, and in 2025 the average was 5.2. This is a steady decrease from 2020 and 2022 when the averages were 7 and 6 respectively.

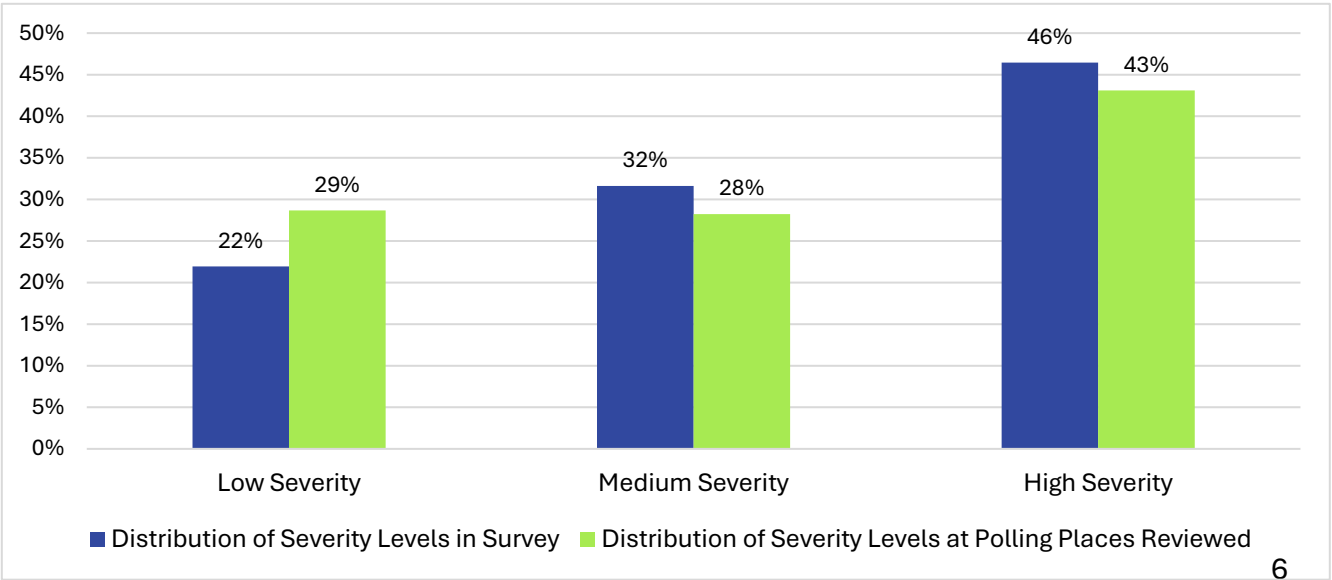

Figure 3: Average Number of Non-Compliant Findings Per Year 2011-2025

Severity Levels

Among all polling places reviewed in 2024–2025, 29% of non-compliant findings were low severity, 28% were medium severity, and 43% were high severity. In terms of the overall issues addressed by the questions from reviewers, 22% are in the low category, with 32% in the medium category, and 46 percent are in the high severity category. So, when compared to the overall distribution of questions that incorporate various severity levels, polling places reviewed in 2024–2025 tended to have more low severity findings and fewer medium and high severity findings.

Figure 4: Distribution of Non-Compliant Findings By Severity

Common Non-Compliant Findings

The most common non-compliant findings are similar to those in previous election cycles. The most common non-compliant finding was that the accessible entrance was not clearly marked at the door, affecting 37% of polling places reviewed. In the 2022–2023 election cycle, 37% of polling place accessible entrances were also not clearly marked at the door.

Figure 5: Ten Most Common Non-Compliant Findings

Rank	Non-Compliant Finding	Severity	Polling Places Affected	2023 Rank
1.	The accessible entrance was not clearly marked at the door.	High	178/477	1.
2.	The accessible entrance door required more than 8.5 pounds of force to open.	High	117/477	5.
3.	Voters did not know the accessible voting equipment was available to use.	High	115/477	10.
4.	The accessible voting equipment was positioned in a way that, if a person was seated or standing at the machine, others might see how the voter was marking his/her ballot.	High	110/477	6.
5.	The van accessible parking sign in the off-street parking area was posted too low.	Medium	102/477	2.
6.	The standard accessible parking sign in the off-street parking area was posted too low.	Medium	83/477	3.
7.	The accessible exterior route had breaks, cracks, or edges where the difference in height was over 1/2 in.	Medium	82/477	7.
8.	At the time of the review, the headphones and tactile keypad were not plugged in and ready to use.	Medium	71/477	N/A
9.	The accessible booth or table in the voting area was not set up to ensure voter privacy. It was positioned in a way that other voters or visitors to the polling place could see how a voter at the table was marking their ballot.	High	68/477	9.
10.	The Type B Notice of Voting Instructions was posted in a font size smaller than 18 pt.	Low	67/477	8.

Another change in the revised survey was to ask which notices were not posted in a large enough font size. The data suggests that clerks mostly post the EL-111, EL-112, EL-115, and EL-117 in a large enough font size. These notices are reused every election and rarely change. The Type B, C, and D notices are more likely to be posted in a font size that is too small or not posted at all. These notices are edited for each election. With this information, staff can include more specific guidance in the election preparation

checklists that are sent out to clerks before each election.

For the first time the review includes data about compliance with curbside voting requirements. The survey provides seven options to describe how a polling place practices curbside voting. At 8% of polling places, election inspectors did not know that they needed to provide curbside voting to voters who were not able to enter the polling place due to disability. See Figure 6 for all options.

Figure 6: Curbside Voting Communication Methods

Curbside Voting Communication Method	Polling Places
Poll workers know they are required to provide curbside voting to voters who are eligible, but there are no instructions posted at the polling place.	147/477
The polling place has a designated parking space with instructions for curbside voting.	120/477
The polling place has instructions for curbside voting at the entrance.	83/477
The polling place has instructions for curbside voting in the parking lot.	70/477
Poll workers do not know they are required to provide curbside voting to voters who are eligible.	37/477
The polling place has a designated parking space for curbside voting but no instructions.	13/477
A greeter is stationed to assist voters trying to access curbside.	7/477

Accessible Voting Equipment

The WEC has received numerous concerns from both voters and advocacy groups, including members of the AAC, about the use of accessible voting equipment being compliant with federal and state law. A chart of all accessible voting equipment related to non-compliant findings identified in this reporting period can be found in Appendix C.

When revising survey questions, a focus was put on improving the questions related to accessible voting equipment to more accurately capture the experiences of voters with disabilities in the data. The survey asks six questions about accessible voting equipment, not including questions related to the dimensions of the table or stand the equipment rests on. Wis. Stat. § 5.25(4)(a) requires that each polling place must have accessible voting equipment available for voters to use while polls are open. It also must provide the same degree of independence and privacy that is afforded to all other voters in the polling place. The review survey asks six questions to assess compliance with these standards:

1. Is the accessible voting equipment set up?
2. Are the headphones and tactile keypad plugged in and ready for voters to use?
3. Is the accessible voting equipment powered on?
4. Is the accessible voting equipment located in the voting area?
5. Do all voters know that the accessible voting equipment is available to use?

6. Is the equipment positioned in a way that if a voter was seated or standing at the machine, no one else could see how the voter was marking their ballot?

There were four models of accessible voting equipment in use during the 2024–2025 election cycle. Only three of those models were present at the polling places reviewed:

- 39% Dominion Voting – ImageCast Evolution (ICE)
- 5% Dominion Voting – ImageCastX (ICX)
- 57% ES&S ExpressVote.

Only 51% of the polling places visited in 2024–2025 had accessible voting equipment set up in full compliance with federal and state standards. There was some variation in compliance between models of accessible voting equipment.

The question “Is the accessible voting equipment set up?” is now supplemented with a question about the necessary components that make the equipment accessible: “Are the headphones and tactile keypad plugged in?” Prior to 2024, if the keypad and/or headphones were missing from the equipment, it was recorded that the equipment was not set up. Although missing headphones and/or keypad may still result in a voter losing their independence and privacy, it is addressed differently than if the equipment was not set up at all. In the 2022–2023 report, 13% of polling places reviewed were identified as not having accessible voting equipment set up. With the separated questions, reviewers found that 16% of polling places did not have headphones and the tactile keypad plugged in, but only 6% did not have accessible voting equipment set up at all. Staff can use this data to focus on training clerks about the importance of having the headphones and tactile keypad plugged in when the polls open. If accessible voting equipment is not set up, the reviewer is not prompted to answer the remaining questions in the section.

Dual purpose voting equipment that is a tabulator and accessible voting equipment, like the ICE, cannot be set up and ready to use without assistance from an election inspector. Reviewers are trained to ask an election inspector how they would accommodate a voter who wants to use the ICE for an accessible voting session. If the election inspector can explain the polling place’s procedure, it is considered set up, turned on, and functioning. If the election inspector cannot explain the polling place’s procedure or is unaware that the ICE can also function as accessible voting equipment, it is considered not set up and the reviewer is not prompted to answer the rest of the accessible voting equipment questions. While the ICE only made up 39% of the accessible voting equipment reviewed, it accounted for 50% of the accessible voting equipment that was not set up.

The remaining questions are only asked in regard to the accessible voting equipment that was set up. Five out of the 447 polling places reviewed had their accessible voting equipment set up but not turned on, and four were set up and turned on but not functioning properly. To determine if equipment is not functioning properly, reviewers are trained to look for error messages on the screen. If there is none, the equipment is determined to be functioning properly. If the accessible voting equipment is not set up, turned on, or functioning properly at the time of the review, reviewers are instructed to ask the chief inspector to correct the problem and report the status of the equipment to the WEC Accessibility Specialist who will work with the municipality to ensure the polling place is brought into compliance.

The question, “Is the accessible voting equipment in a location where voters will see it and know it is available when they enter the voting area?” was meant to address the requirement that accessible voting equipment offer equal independence to voters with disabilities as to voters without disabilities. If a voter has blindness or low vision or does not know what accessible voting equipment looks like, its presence in the voting area does not inform voters that it is available. Additionally, the language about being able to see the equipment ignores the fact that HAVA names nonvisual accessibility in its standards: “the voting system shall be accessible for individuals with disabilities, including nonvisual accessibility for the blind and visually impaired, in a manner that provides the same opportunity for access and participation (including privacy and independence) as for other voters.”

Committee members decided to split the original question into two separate questions to more directly address the issue of independence:

“Is the accessible voting equipment located in the voting area?” and “Do all voters know that the accessible voting equipment is available to use?” While federal and state law are not specific about how to assess independence, the Committee decided to provide the reviewer with best practices to choose from, rather than a yes or no answer. The responses are: “Yes, election inspectors are offering the accessible voting equipment to each voter;” “Yes, there are signs telling voters that accessible voting equipment is available;” “Yes, other” and a text field; and “No.” The 2024–2025 data shows that 99% of polling places reviewed had the accessible voting equipment in the voting area but only 74% of polling places took measures to inform voters that it was available to use.

Members of the AAC who also work as poll workers have found that more voters use accessible voting equipment when they refer to it by name or ask if the voter would like to vote on a touchscreen. Increased use of accessible voting equipment reduces voter error, spoiled ballots, and destigmatizes the equipment. In polling places that use the ExpressVote, which takes a card that is a different size than a paper ballot, increased use of accessible voting equipment increases privacy as well. If only a few voters in a polling place use the ExpressVote, and their ballots are a different shape, it may endanger a voter’s right to a secret ballot.

The other significant problem, affecting 25% of polling places, was a lack of privacy at the accessible voting equipment. A privacy shield alone is unlikely to provide sufficient privacy. When a voter is standing in a voting booth, their body is blocking the view of their ballot from passersby. When a voter is seated either marking a paper ballot or using accessible voting equipment, someone standing or walking behind them can see the ballot over the voter’s shoulder. If the accessible voting equipment is positioned so the voter is facing a wall with their back to the center of the room, which is how standard voting booths are often positioned, it is unlikely the voter is being provided the same level of privacy as other voters in that polling place.

Additionally, when a polling place uses dual purpose equipment like the ICE and does not have an auxiliary screen to allow tabulation and accessible voting sessions to be run simultaneously, providing equal privacy can be a challenge. When a piece of equipment is functioning as a tabulator, it must be positioned so voters can deposit their ballots and keep the flow of traffic moving. For this reason, it is often positioned near the exit and not near the voting booths.

Typically, the screen of the tabulator faces into the room so voters can see it when they deposit their ballot. For an accessible voting session, the ICE should be repositioned so the screen faces a wall or

corner, and no one can be behind the voter while they are marking their ballot. Reviewers are trained to ask an election inspector what the procedure is for maintaining privacy for a voter using the ICE. If the election inspector can explain the polling place's procedure for providing a voter privacy, it is considered private. If the election inspector cannot explain the polling place's procedure, the accessible voting equipment is considered not private. It is important to note that if an election inspector was unable or unaware of the polling place's procedure for providing accessible voting sessions, the reviewer was not prompted to answer the remaining questions including the question about privacy.

Without an auxiliary screen for accessible voting sessions, an election inspector must pause tabulation and begin an accessible voting session for the voter. The ICE has a locked bin on its side where other voters can deposit their ballots during this time. Marking a ballot using the ICE may take longer than marking a ballot by hand, especially if a voter is using the audio tactile interface and having the ballot read to them. Once the voter has completed their accessible voting session, election inspectors return the ICE to its tabulating function and deposit the ballots from the locked compartment. Some voters may prefer to wait until the accessible voting session is finished so they can insert their own ballot into the tabulator. This can stop the flow of traffic and create a line of people waiting near the voter using the accessible voting equipment. Each polling place should have a plan in place to redirect voters to wait away from the voter completing an accessible voting session.

Accessibility Advisory Committee

Throughout 2024 and 2025, WEC staff met monthly with members of the agency's Accessibility Advisory Committee (AAC). A complete list of members and their organizations can be found in Appendix D. Committee members provide staff with invaluable insight from their personal experiences as people with disabilities and from decades of advocating for the rights of voters with disabilities and older adults.

From May to November of 2023, the AAC worked with staff to revise the questions used in the Polling Place Review Program. The goals of this revision were to correct out-of-date information, increase the amount of quantitative data collected, and improve efficiency for reviewers. New questions were introduced to gather data about curbside voting and the use of greeters. Curbside voting must be available at all polling places for voters who are unable to enter the polling place due to disability. Previously the WEC only found out if a polling place was not offering curbside voting if a voter submitted a concern or complaint. Now that reviewers are asking election inspectors whether they do and noting if there are signs at the polling place, Commission staff better understand what curbside voting looks like in practice and what clerks and election inspectors can do to improve.

In 2024 the AAC aided staff in creating new training resources for clerks. One was a pre-recorded webinar that detailed the different ways a voter with a disability can receive assistance and how to provide that assistance. This included tasks like signing forms, marking a ballot, and assistance returning an absentee ballot. The other webinar was live and featured committee member Anna Anderson, from Disability Rights WI (DRW), as well as guests Cindy Piotrowski, the Director of the Aging and Disability Resource Center of Portage County, and Cheryl Orgas, the Executive Director of Audio & Braille Literacy Enhancement, talking about the kinds of resources and services their organizations provide that can support voters with disabilities and clerks who are trying to make the voting experience more accessible. Since this was a live webinar clerks were able to ask questions and learn from the presenters.

Additionally, WEC staff attend regular meetings of the Disability Vote Coalition (DVC), which is a non-

partisan effort to ensure full participation of voters with disabilities in the entire electoral process. The DVC is co-chaired by Jenny Neugart of the Board for People with Developmental Disabilities (BPDD) and Anna Anderson of DRW. Anna Anderson brought to staff's attention that the existing Hospitalized Voter Guide was difficult to use due to the small font size, large blocks of text, and the use of specialized legal terms without definitions. Staff worked with the AAC and DVC to update the guide, and through the partnership with the DVC, staff were able to get feedback on the new guide from Vot-ER, a non-partisan organization that works on voting rights issues in the context of the healthcare system.

In October of 2024 the WEC was invited to join the DVC's table at the Self-Determination Conference hosted by BPDD. Together, the DVC and WEC had a mock polling place exhibit so voters with developmental disabilities could practice going through all the steps of voting in person at a polling place. The DVC coordinated with a voting equipment vendor to have accessible voting equipment available for voters to learn how to use. The WEC reached out to local clerks and were able to have real poll workers participate as a training exercise for the General Election. The poll workers practiced instructing voters to sign the poll book and issue ballots, and the conference attendees practiced showing photo ID, signing the poll book, and using accessible voting equipment.

Beginning in the spring of 2024 WEC staff worked with committee members Jason Glozier, WI Coalition of Independent Living Centers (WCILC), and Kyle Kleist, Compass IL, to form a partnership in which the WEC contracts certified ADA assessors from the eight independent living centers around the state to conduct polling place reviews. Moving to this model from using temporary staff hired through staffing agencies has allowed the WEC to cover a greater geographic area, improve the quality of data collected, and save staff time spent on training.

WEC staff was invited by Disability Rights WI to collaborate on a presentation at the Department of Health Services' FOCUS Conference on the topic of voting in residential care facilities and retirement homes served by Special Voting Deputies.

Supply Program

The data gathered by the review program has provided a baseline for polling place accessibility in Wisconsin. This information has been used to identify common problems with polling place set-up and accessible voting equipment and general problems with municipal and private facilities where polling places are located. Review of this data allowed WEC staff to adjust the existing training protocol and develop additional training resources. As detailed earlier in this report, specific problems identified during polling place reviews are also reported to municipalities to improve compliance. In addition to providing this guidance, the WEC has purchased and distributed accessibility-related supplies to assist local elections and municipal officials with completing the necessary polling place changes. Supply orders are generally expected to correspond with findings from either a self-reported or WEC-conducted review, but municipalities can request any supplies that improve accessibility if they designate a need for the supplies with their request.

Two new items were added to the supply program at the recommendation of AAC members. Denise Jess advised that page magnifiers are not effective because they only provide 200% magnification and must be removed from the ballot in order to mark it. Staff replaced page magnifiers with lighted magnifying glasses that can magnify up to 300%. The handle of the magnifying glass folds out into a stand, so a voter can move and mark their ballot underneath it. Kyle Kleist recommended the addition of an adjustable

threshold ramp because it is featured in recommendations provided by the WEC to correct a change in level greater than half an inch at a door threshold. It is often mistaken with a regular ramp. That confusion is eliminated by including it in the Supply Program.

In financial years 2024–2025, 381 orders were placed by 339 municipalities. The most popular supplies are the orange cone, page magnifier, signature guide, and accessible entrance sign. With the exception of the page magnifier and signature guide, these supplies can be used to address some of the most common non-compliant findings. The accessible entrance window decal solves the problem of unmarked accessible entrances. Orange cones can be used to mark temporary accessible parking spaces and access aisles, and a wireless doorbell can be used to alert election inspectors that a voter needs assistance entering the polling place because the door is too heavy.

Clerk Support

Staff revised the existing Polling Place Set Up Guide, Quick Fix Guide, Election Day Checklist, and Common Courtesy document and combined them into a Polling Place Accessibility Toolkit.

Additionally, staff created two pre-recorded webinars and a live webinar to train clerks on accessible voting topics. One pre-recorded webinar covered the different ways voters with disabilities can receive assistance and the other explained the polling place review program. The live webinar familiarized clerks with local resources they could use to make voting more accessible. The webinar featured three guest speakers: AAC member Anna Anderson, from Disability Rights WI (DRW), as well as guests Cindy Piotrowski, the Director of the Aging and Disability Resource Center of Portage County, and Cheryl Orgas, the Executive Director of Audio & Braille Literacy Enhancement Inc.

Under the Consolidated Appropriations Act of 2023 (Public Law 117-328), the WEC was awarded additional federal funds to “improve the administration of elections for Federal office, including to enhance election technology and make election security improvements.” The WEC created a subgrant to aid clerks in improving the set-up of their accessible voting equipment. The Commission approved the disbursement of up to \$350,000 of these federal funds through the approved 2023 Accessible Voting Equipment Subgrant Program for Municipalities. Each jurisdiction may receive up to \$750 under this subgrant, until allocated funds are depleted. As of April 30, 2025, just under \$109,000 has been awarded to 155 municipalities. Municipalities have used these funds to purchase ADA compliant tables, booths, and privacy shields for their accessible voting equipment, headphones for the audio tactile interface, a secondary display for the ICE, or to put towards the purchase of an ExpressVote, ICX, or ICE.

Accessibility Concern Form

The WEC maintains a concern form on its website for voters to report accessible voting issues. This form allows for a structured process for individuals to report incidents to the WEC and have them resolved or followed up quickly. On the concern form, the voter must select from a drop-down menu that includes polling place accessibility, curbside voting, voting equipment, website accessibility, and other. Each category has various issues that a voter can select, and, if they choose, enter their contact information for staff to follow up. Below is a summary of the concerns that the WEC received from June of 2023 to April of 2025 with the frequency reported in parentheses.

- Poll worker unwilling to follow Wis. Stat. § 6.79(8) accommodation for voters unable to state name

- and address (4)
- Lack of privacy at accessible voting booth/equipment (3)
- Issues returning an absentee ballot (3)
- Inaccessible pathways at polling place (3)
- Lack of signage at polling place (2)
- Inaccessible parking at polling place (2)
- Curbside voting issues (2)

Please note that this list does not include unrelated concerns that were submitted using the concern form, including concerns about the USPS and receiving an absentee ballot on time, concerns about accessing Spanish language election materials, questions about polling place location, and questions about voting equipment jams. Those issues were addressed by WEC but are not included in the data above. Voters still have the option to file a sworn complaint, and it is often suggested especially for voters who want formal outcomes or who have an issue that cannot be resolved quickly.

Best Practices from Around the State

Clerks across Wisconsin worked tirelessly to assist voters with disabilities and brainstorm creative solutions to problems. This list is just a few examples and is in no way comprehensive and can never represent all the work that clerks do daily to make voting accessible.

The City of Brookfield – Waukesha County provides braille sample ballots to its voters with blindness and low vision.

The Village of Suamico – Brown County does outreach and teaches voters about accessible voting equipment to get them comfortable with using it before Election Day.

The City of Menasha – Winnebago County created a system for voters to be able to sit while they wait to check in on Election Day.

The Village of Black Earth – Dane County works with nursing homes to make sure residents are registered and know what their options are for casting a ballot.

The City of Green Bay – Brown County schedules in-person absentee voting at alternate sites until 7 p.m. so that voters who work during the day still have the option to vote early.

The Village of Shorewood – Milwaukee County provides braille ballots to voters and often works with Audio and Braille Literacy Enhancement.

Conclusion

This report identifies the need for continued improvement for accessible voting in Wisconsin for elderly voters and voters with disabilities but also outlines the work that was done in this reporting period to ensure that all voters had the ability to exercise their right to a private and independent ballot. The Wisconsin Elections Commission remains committed to visiting every polling place in the state to assess compliance with laws designed to ensure that all voters can enter their voting location on Election Day

and cast a private and independent ballot. WEC staff and representatives have visited the vast majority of municipalities in Wisconsin over the last 16 years and continue to create plans to review new and unvisited polling places.

The agency's polling place accessibility review program has been successful in identifying common accessibility problems, reporting those issues to local election officials, and working with local election officials to rectify those problems. The decrease in the average number of audit findings indicates an improvement in the accessibility of polling places.

Advocacy groups representing elderly voters and voters with disabilities were essential to decreasing barriers that voters face in Wisconsin. Going beyond physical accessibility, it is important for polling places to be accessible in every way to voters with disabilities. Creating an easy-to-use accessibility concern form allows for better tracking and ensures that WEC can tailor its training to be impactful in reducing barriers to participation. Additionally, the updated Election Day Accessibility Checklist allows clerks and poll workers to assess their polling place, including their interactions with voters, to make improvements in how the polling place is organized and how election inspectors interact with voters.

Despite turnover of Wisconsin election officials, it is promising that polling place review data was relatively consistent throughout 2011–2025. This report suggests that the data does not fully capture the experience of elderly voters and voters with disabilities. Training efforts and materials may have led to increased clerk awareness of accessibility practices, and it is possible that future accessibility reviews will reflect that these efforts have improved the accessibility of polling places for individuals with disabilities. Commission staff will continue to conduct reviews and provide supplies to clerks to increase access to the polls for all eligible voters. The Accessibility Advisory Committee will continue to meet so that advocacy groups can share their experience and expertise with Commission staff. All the information gained through these collaborative efforts will be used to create a well-rounded training protocol for local election officials and poll workers to ensure that all eligible voters can cast a ballot without barriers that discourage participation.

Appendix A: Polling Places Reviewed 2024-2025

Jurisdiction	Polling Place Name	NC Score
City of Altoona - Eau Claire Co.	River Prairie Center	2
City of Ashland - Ashland Co.	Bretting Community Center	7
