### **McKinley Beach Study**

**Draft Final** 

Coastal & Environmental Consultants

#### **Purpose and Scope**

The purpose of this study is to identify measures necessary to improve swim safety, beach sustainability and water quality at McKinley Beach.

# **Key Considerations**

- Can design mitigate the challenges faced by McKinley Beach?
- How can swim safety be improved and encouraged?
- How is water quality impacted?
- Are high water levels, similar to 2020, likely to cause future damage to McKinley Beach or adjacent infrastructure such as Lincoln Memorial Drive?

## **Report Approach**

- Review of Existing & Historic Data
- Field Study
  - On-Site Buoy
  - Dye Testing
- Wind & Wave Analysis
- Hydrodynamic Modeling
- Solutions & Alternatives
  - Viability
  - Feasibility
  - Preferability

McKinley Beach Through Time

 McKinley Beach began to form in 1937 when the construction of Government Pier interrupted the "Longshore Currents" which carry sand along the coast.

 McKinley Beach began to form in 1937 when the construction of Government Pier interrupted the "Longshore Currents" which carry sand along the coast.

 SEWRPC Guidance Contemporary to Construction

Historic Water & Waves

Top Ten Mean Monthly Water Levels Since 1918			
Year	Month	Water Level	
1986	October	582.35'	
2020	July	582.22'	
2020	June	582.19'	
2020	August	582.09'	
1986	July	581.99'	
1986	August	581.99'	
1986	September	581.96'	
1986	November	581.96'	
2020	May	581.96'	
2019	July	581.92'

Historic Wind

![](_page_10_Figure_2.jpeg)

May 27 – Oct. 28 2020 Wind at Atwater Beach

NOAA Buoy #45013

![](_page_10_Picture_5.jpeg)

2020 Incidents

Date	Time	Peak Wind Speed (mph)	Wind Directional Range (degrees nautical)	Wave Height (feet)
3-Jun-20	Before 7:00 AM	16	180-360	2
18-Jul-20	Before 8:30 PM	23	130-210	2
8-Aug-20	Before 6:30 PM	17	130-210	2

- Identification of Trends
  - Wind Direction
  - Wave Magnitude
  - Incident Location

>>>Use observed trends to direct field & modeling.

## Considerations

- Viability, Feasibility & Preferability
- Impacts
  - Existing Infrastructure
    - LMD
    - Jetty With Flagpole
    - McKinley Walks & Playground
  - Use & Utilization
  - Swim Safety
  - Beach Sustainability
- Supplemental Funding & Initiatives

![](_page_32_Picture_11.jpeg)

## **Solutions**

- Hard Solutions
  - Modifications to Breakwater
  - Submerged Stone Reef
  - Sandbar/Pebblebar
- Soft Solutions
  - Swim Warning System
  - Public Outreach & Education
  - Beach Closure
- Temporary Solutions
  - Buoy Rope Between Breakwaters

![](_page_33_Picture_11.jpeg)

#### **Concept 1 – Natural/Hard Hybrid**

![](_page_34_Picture_1.jpeg)

![](_page_34_Picture_2.jpeg)

#### **Concept 2 – Offshore Breakwater**

![](_page_35_Picture_1.jpeg)

![](_page_35_Picture_2.jpeg)

Concept 2 - Offshore Breakwater & Modifications to Existing		
Offshore Breakwater	\$2,200,000	
Natural Areas Restoration	\$1,500,000	
Total:	\$3,700,000	

![](_page_35_Picture_4.jpeg)

#### **Concept 3 – Connected Breakwater**

![](_page_36_Picture_1.jpeg)

![](_page_36_Picture_2.jpeg)

Concept 3 – Connected Breakwater and Natural Restoration		
Connected Breakwater	\$1,900,000	
Natural Areas Restoration	\$210,000	
Beach Fill	\$200,000	
Total:	\$2,310,000	

![](_page_36_Picture_4.jpeg)

#### **Concept 4 – Beach Restoration**

![](_page_37_Picture_1.jpeg)

![](_page_37_Picture_2.jpeg)

ed Design	Concept 4 - Beach Restoration to Intend
\$200,000	Torpedo Sand Fill
\$50,000	Structural Fill Scour Holes
\$250,000	Total:

![](_page_37_Picture_4.jpeg)

#### **Concept 5 – Breakwater Pool**

![](_page_38_Picture_1.jpeg)

![](_page_38_Picture_2.jpeg)

LaJolla Children's Pool as Precedent

Concept 5 – Offshore Breakwater, Re-Orient Opening		
Remove Existing Breakwater	\$760,000	
Construct New Breakwater	\$4,140,000	
Total:	\$4,900,000	

![](_page_38_Picture_5.jpeg)
